

Your Partner in Papermaking...

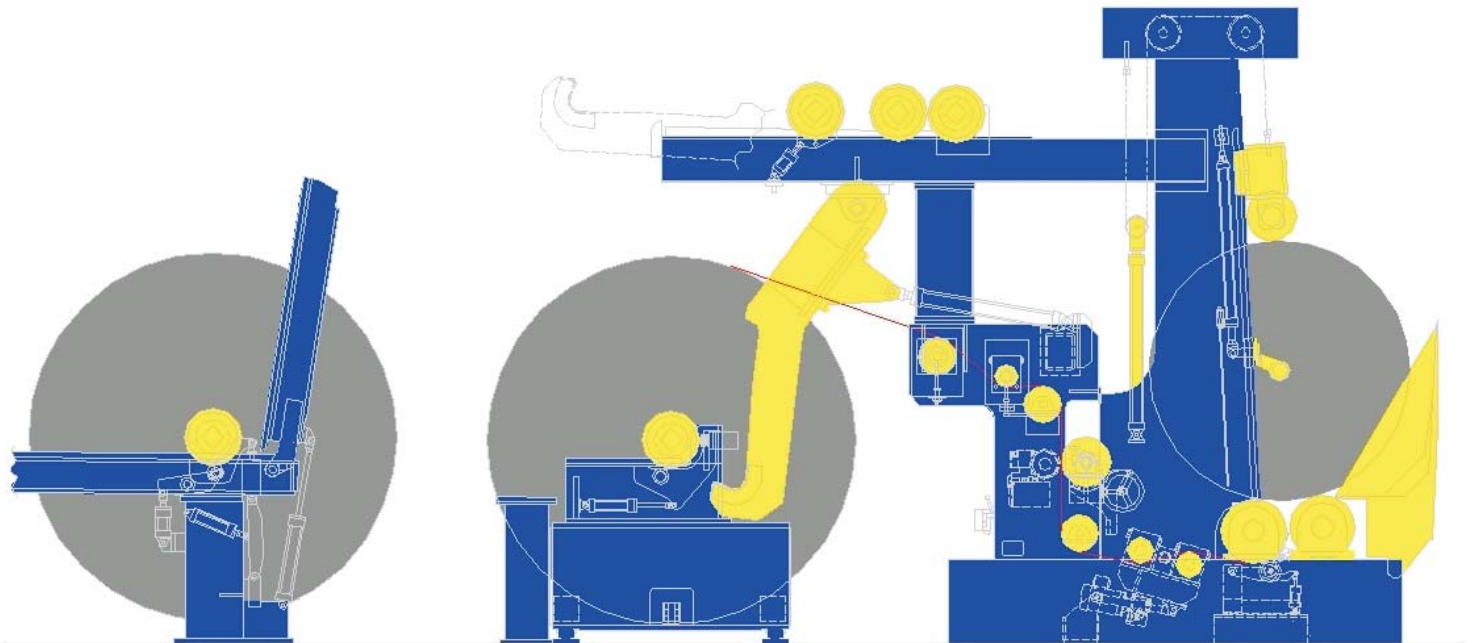

And Now Winders Too!

Partnership Promise

At R-V Industries we're committed to partnering with you to develop equipment solutions that best suit your application.

We've taken that partnership promise further by offering upgrades and rebuilds to paper machinery and converting winders. Now we can supply new winders or modernize your existing one with the same custom design and manufacturing quality you expect.

Benefits

- Scrap Reduction
- Safety
- Efficiency - operator & machine
- Increased production
- Reduced maintenance
- Man power reduction
- Flexible operation
- Full computer controls integration

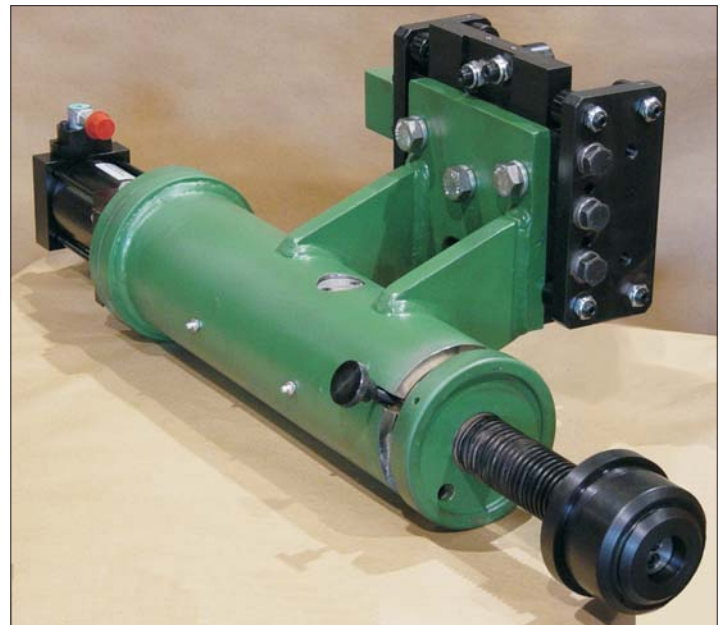

Core Chucks Before Repair

Case Study

Problem: The way bars and core chucks of this particular paper machine winder were in need of repair. The machine was outputting about ten percent in scrap due to telescoping rolls and it was causing safety and quality issues.

Solution: R-V Industries replaced the way bars and modernized the core chucks. The pneumatic core chuck lifts were replaced with hydraulic ones.

Result: By partnering with R-V Industries the customer was able to reduce their scrap output to an acceptable level. Their winder is also back to safe operating conditions.

Core Chucks After Repair

Partner your specifications with our knowledge and experience, and we will show you how we can improve your winder equipment performance.

New Winder Equipment Features:

- Rider roll relieving system
- Slitter section with adjustable position
- Spreader section with pivoting table
- Shafted or shaftless design
- Full back stand

Rebuild Equipment Options:

- Replacement winder drums
- Shafted to shaftless conversions
- Top framing
- Framing replacement
- Lowering cradle modifications
- Unwind back stands
- Spreader section upgrades
- Slitter section enhancements
- Rider roll relieving systems
- Control upgrades
- Tension control systems
